

Project Case Study Scan Record

Institution & Clinician Information

Name	<i>NM</i>	Location	<i>ST Georges</i>
Practice	<i>Bermuda Podiatry Centre</i>		

Background Patient Information

Sex	M	Age	72	Consent given to sharing this report [Y/N]	Y
Background medical condition (only what is relevant to the podiatric condition)		Diabetes type 2 ,24 years Right knee fracture 2005			
Reason for podiatrist visit		Pain right foot cannot walk			
Previous interventions, e.g. if follow-up visit to a previous Podium scan (only if relevant for current podiatric condition)		Air-cast walking boot ,urgent care Florida DX Plantar fasciitis. Functional orthotics issued ,pain improved rapidly			

Current Session Information

Clinician's examination / assessment / test results / findings	Both pulses biphasic Loss of vibration and no monofilament right foot No pain medial calcaneum in right foot resolved.
Clinician's intervention / advice given / medication prescribed	Continue using functional orthotic

PODIUM Scan Details and Clinical Assessment

Date of previous Podium scan session (if applicable)		14/10/22	
Date of this scan	27/1/22	Time of this scan	10.56
Patient ID or code used in Podium Portal		BPCpat004	Room temperature 75
Time between "socks off" and scan [mins]		20	Est. duration of scanning process [mins] 7
Scan made before [B], during [D] or after [A] above Session?			
		A	
Clinician's interpretation of scans (if follow-up scan from a previous visit, include any changes to previous status)		Previous scan showing inflammation more medial which has improved as inflammation cleared. Return to patient normal with more lateral changes as before which would indicate signs of Charcot foot but patient experiencing no pain	
Details of subsequent intervention		Continue functional foot orthotic and shoe advice given No further intervention necessary at present	
Details as to the influence on patient management decisions		Continue to monitor this high-risk diabetic patient	
Patient benefit from intervention		Great for patient education and to put some fear into the subject once they can see changes on scan?	
Details of any institutional benefits		Preventative therefore reduction in amputation rate?	
Details of where the podium system was positioned in the care pathway		Diagnostic, educational
