

Project Case Study Scan Record

Institution & Clinician Information			
Name	CM		Location UK
Practice	All Toe-gether Podiatry		

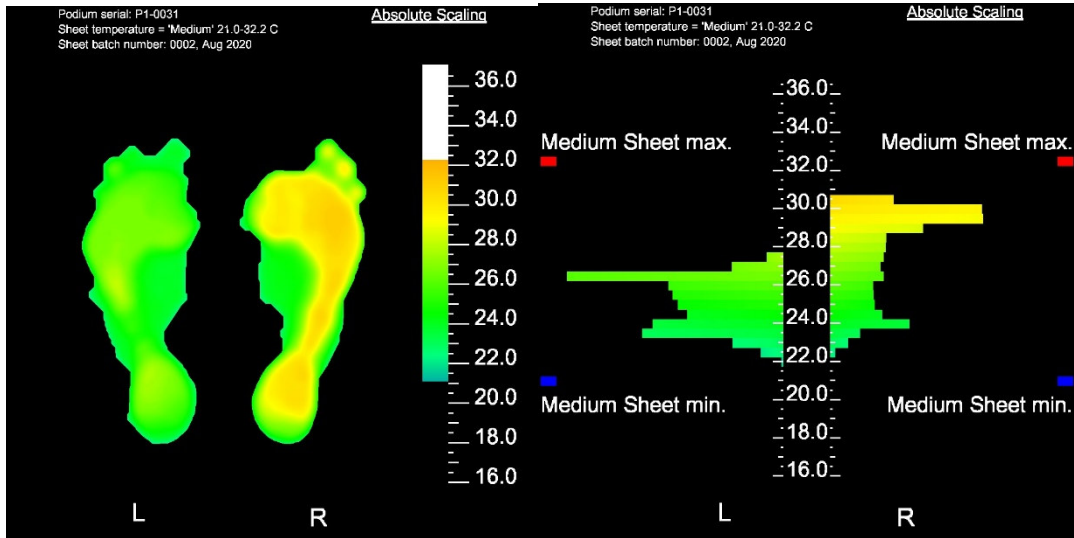

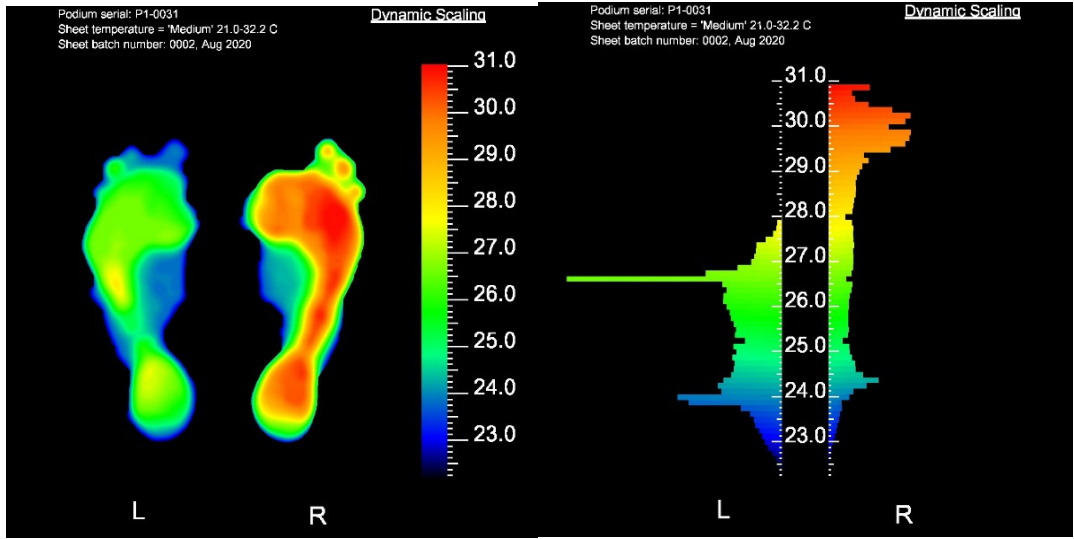

Background Patient Information					
Sex	F	Age	80	Consent given to sharing this report [Y/N]	Y
Background medical condition (only what is relevant to the podiatric condition)		N/A			
Reason for podiatrist visit		Routine Treatment – Presenting Complaint at the time – Patient said ‘I have had swelling on the side of my foot for eight days, the Doctor said see what you think and if it doesn’t get any better I can have antibiotics.’			
Previous interventions, e.g. if follow-up visit to a previous Podium scan (only if relevant for current podiatric condition)		N/A			

Current Session Information	
Clinician's examination / assessment / test results / findings	Initial scan due to presentation and no known injury, medical complaint etc.
Clinician's intervention / advice given / medication prescribed	Orthotics prescribed

PODIUM Scan Details and Clinical Assessment			
Date of previous Podium scan session (if applicable)		N/A	
Date of this scan	28/06/2022	Time of this scan	13:51PM
Patient ID or code used in Podium Portal	PAT66	Room temperature	21
Time between “socks off” and scan [mins]	5	Est. duration of scanning process [mins]	10
Scan made before [B], during [D] or after [A] above Session?	B		
Clinician's interpretation of scans (if follow-up scan from a previous visit, include any changes to previous status)	R/F 3 degrees hotter – over 2.5 degrees – cause for concern / monitoring – prescribe orthotics to support foot function and limit any possible joint damage as at present unknown cause.		
Details of subsequent intervention	12/07/22		
Details as to the influence on patient management decisions	Without the scan the treatment pathway would have been refer straight to GP rather than inhouse orthotic prescription and follow up management by further scanning.		
Patient benefit from intervention	Patient stood up and said that she was instantly more comfortable, this is a lady who previously we have never seen smile, and this raised a smile which was a fantastic result for clinician and patient!		
Details of any institutional benefits	Confidence in decision making and diagnosis due to insight from scan.		
Details of where the podium system was positioned in the care pathway	Primary

Project Case Study Scan Record

Institution & Clinician Information

Name	<i>Carl & Serena Morris</i>	Location	<i>Glanhafren Market Hall Newtown, Powys and Shropshire Hills Discovery Centre, Craven Arms SY7 9RS</i>
Practice	<i>All Toe-gether Podiatry</i>		

Background Patient Information

Sex	F	Age	80	Consent given to sharing this report [Y/N]	Y
Background medical condition (only what is relevant to the podiatric condition)				N/A	
Reason for podiatrist visit				Follow up Podium Scan	
Previous interventions, e.g. if follow-up visit to a previous Podium scan (only if relevant for current podiatric condition)				Orthotic prescription – Basic Full Length Medium Density MLA with no additions	

Current Session Information

Clinician's examination / assessment / test results / findings	10g Monofilament Detected B/F
Clinician's intervention / advice given / medication prescribed	After orthotics were prescribed

PODIUM Scan Details and Clinical Assessment

Date of previous Podium scan session (if applicable)				
Date of this scan	12/07/2022	Time of this scan	15:51PM	
Patient ID or code used in Podium Portal		PAT66	Room temperature	21
Time between "socks off" and scan [mins]		5	Est. duration of scanning process [mins]	10
Scan made before [B], during [D] or after [A] above Session?				
Clinician's interpretation of scans (if follow-up scan from a previous visit, include any changes to previous status)		Temperature differential between feet very much improved to previous scan, Feet are more symmetrical Dynamic scaling - hot spot L/digits and pl L/3rd MTPJ compared to R/F and larger area of L/F hotter than R/F. 1 degree hotter L/3rd MTPJ area to R/3rd MTPJ area.		
Details of subsequent intervention		Not required at present, review and assess in 6-12 months according to patients progress.		
Details as to the influence on patient management decisions		Further referral / interventions not required as can be seen from scan that there is no 2.5 degree difference between feet – scan and results sent to GP for patient records		
Patient benefit from intervention		Pain reduction, improved quality of life in a very short time scale, no long waiting lists for treatment following further investigations, consultations etc.		
Details of any institutional benefits		Accurate monitoring of condition which is measured, better understanding and measurement of treatment outcomes and what is successful.		
Details of where the podium system was positioned in the care pathway		Primary
